TABELLER

— som utvisa de i Sverige mäst brukliga Vigtens för-
hållande till hvarandra, nemligen: Victualievigt,
Bergsvigt, Stapelstadsvigt, Uppstadsvigt
och Tackjernsvigt.

FAHLUN,

Tryckt hos Carl Richard Roselli, 1837.

ERINRAN:

1:o Victualievigten ligger till grund vid justering af Bergsvigt, Stapelstadsvigt, Uppstadsvigt och Tackjernsvigt. Denna begagnas sällan vid Bruk; men deremot alltid af Victualiehandlare och Kramhandlare i städerna. På Victualievigterna äro lödjorna cirkelrunda.

2:o Bergsvigten är svagare än Victualievigten och begagnas endast vid Bruk. Lödjorna äro, likasom de följande Vigternas, sexkantige.

3:o Stapelstadsvigten är svagare än Bergsvigten; ty då skeppundet af den sednare innehåller 17 *℔*. 12 *℥*. Victualievigt, så innehåller denna endast 16 *℔*. per skeppund samma vigt. Denna användes mest vid Stapelstadsvågarna, hvarest jern och smiden lefvererus och insätts.

4:o Uppstadsvigten är, i anseende till tyngden, emellan Bergs- och Stapelstadsvigten, och förekommer sällan eller aldrig vid Bruken.

5:o Tackjernsvigten innehåller 26 *℔*. Bergsvigt per skeppund, afbränningen inberäknad. Man räknar på tackjernsvigt 26 *℔*. per skeppund, för att kunna undvika afbränningens upptagande i räkenskaperne, emedan Tackjerns-skeppundet då har sin afbränning inne med sig och Smeder deremot böra lefverera 1 Skeppund Stångjern; NB som endast innehåller 20 *℔*. BV. Vid vägning begagnas Bergsvigts-lödjor.

Uträkning och jämförelse emellan Rikets mäst brukliga Vigter.
