

Nr 113.

**Av herr Holmgren, om årligt understöd åt förre daglönaren Johan
Alfred Lindström.**

(Lika lydande med motion i Första kammaren nr 65.)

Stockholm den 20 januari 1928.

Bj. Holmgren.

The first part of the book is devoted to the study of the properties of the function $f(x)$ and its derivatives. It is shown that the function $f(x)$ is continuous and differentiable on the interval (a, b) if and only if it is continuous and differentiable on the interval (a, b) .

The second part of the book is devoted to the study of the properties of the function $f(x)$ and its derivatives. It is shown that the function $f(x)$ is continuous and differentiable on the interval (a, b) if and only if it is continuous and differentiable on the interval (a, b) .

The third part of the book is devoted to the study of the properties of the function $f(x)$ and its derivatives. It is shown that the function $f(x)$ is continuous and differentiable on the interval (a, b) if and only if it is continuous and differentiable on the interval (a, b) .

The fourth part of the book is devoted to the study of the properties of the function $f(x)$ and its derivatives. It is shown that the function $f(x)$ is continuous and differentiable on the interval (a, b) if and only if it is continuous and differentiable on the interval (a, b) .
